# AI enablement

## Expand people's capabilities.
## Evolve your team's roles.

### 01 Find the right place to start

DIAGNOSTIC / 1 WEEK / BOOK SEPARATELY

A clear map of recurring work, risks to address and 2-3 tasks to test with AI.

Know where AI is useful and where you need human judgment.

### 02 A workflow your team can run

PILOT / 3-4 WEEKS / OPTIONAL NEXT STEP

One working process, a short guide and clear checks for the results.

Practise on real tasks, then test whether your team can repeat it without me.

**Designed for digital products and design teams across all industries.**

We agree the scope and a fixed price before each stage starts.
No integrations, no custom development, no maintenance.

You bring someone inside who owns the project,
and a safe way to handle data.

**Tell me about your team and one recurring task you'd like to improve.**
